

UNDERGRADUATE RESEARCH OPPORTUNITY

AQUACULTURE RESEARCH

The University of Miami Aquaculture Program provides opportunities for undergraduates to conduct research on a variety of different aspects of marine aquaculture. From hands-on work with multiple high-value marine fish species to research on aquaculture physiology, nutrition, business / market analysis, policy, and sustainability, students will have an opportunity to engage in many aspects of the field of aquaculture.

Undergraduate students are encouraged to learn and volunteer in the various ongoing studies in the Aquaculture Program, and those who demonstrate proficiency and keen interest in particular aspects of research will have opportunities to undertake independent aquaculture research projects.
